

INTERIM REPORT Q2 2022

INDUCT AS

Highlights

- Total revenues increased by 96% from Q2 2021 to Q2 2022, from NOK 2,7 million to NOK 5,3 million.
- A stable and high gross margin on platform revenues at 95,4 % in Q2 2022.
- Platform revenues increased by 139% from Q2 2021 to Q2 2022, from NOK 2,0 million to NOK 4,8 million.
- Positive EBITDA of NOK 3,0 million in Q2 2022, an increase from NOK 0,9 million in Q2 2021.
- Ad revenues generated from 66 countries in Q2 2022.
- Grantway became a global search portal for funding opportunities on June 29th 2022.

CEO Comment

We continue delivering strong results and are delighted to share that platform revenues have grown by 139% and that our EBITDA has tripled compared to Q2 2021.

Grantway became a global offering on June 29th 2022 and we are now working on including EU grants and US government grants to the portal. These sources will make Grantway the portal with the highest and most up to date number of grant opportunities in the market. We will continue to include more sources, and our goal is to make Grantway the natural choice for anyone looking for funding opportunities.

Identifying market segments with both large user groups and high content quantities is an activity that has our highest focus. The next steps for Grantway include the ability for users to self-register funding opportunities, management of the grant application process, and portfolio management of funded projects.

We are currently working on two concepts similar to Grantway that also have global potential.

Portsmouth Hospitals University NHS Trust continue to express excitement with the patient management solution for severe asthma patients. The next steps towards wider use of the solution are anticipated to take place in Q3/Q4 2022. Security is key in this offering, and as such, there is no room for shortcuts.

Ad revenues continue to grow alongside growth in our induct.net user base. Global RPM (revenue per 1000 ad shown) is NOK 12,16 in Q2 2022, with a variance of NOK 1,83 – NOK 63,21 from the lowest to highest paid markets. The global RPM is expected to grow as our offerings mature and user base continues to grow.

Alf Martin Johansen
CEO

Operational Review

Our core day-to-day operations are stable and we maintain a strong >95% gross margin on our subscription revenues. From a product development and growth perspective, this quarter has focused on the development and launch of the global Grantway portal.

On June 29th we launched the global version of Grantway – the search portal for funding opportunities. The launch represents the completion of a major milestone for the product and lays the foundation for entering new geographical markets and reaching new market segments.

It is now possible for anyone, anywhere in the world, to access Grantway, from any device including smart phones, and search for funding opportunities that are available to them locally, nationally and internationally. Where the first version primarily contained grant opportunities, the global version makes it possible to search for and find relevant scholarships, fellowships, sponsorships and loans.

Although Grantway is a stand-alone product offered on the induct.net platform, our aim is to integrate it with other value-add products and offer an all-in-one solution to our users. We have started on this work by giving Grantway users easy access to Meet@Induct, our free-of-charge video meeting solution.

We are very pleased that other providers of search portals and funding opportunity data are contacting us proactively to discuss how they can get their data onto Grantway, and even more promising – how they can discontinue their service and re-direct their users to Grantway. Not only does this confirm the need for Grantway and our business model in the market, it also shows that we are reaching users and organizations organically and building brand awareness.

Grantway is using OSINT Analytics technology for web scraping and data mining to collect publicly available data on funding opportunities. Similar technology is being used to develop a global search portal for science articles, literature and data sets - Leita. Leita.ai is an innovative Open Access platform that give users access to scientific research that previously have been subject to high subscription fees. The PoC version has been published and is being tested by a test panel consisting of both academic researchers, research librarians and medical researchers from Norway and England.

In Q2, the Induct Group signed 7 new subscription contracts and lost 4 subscription contracts.

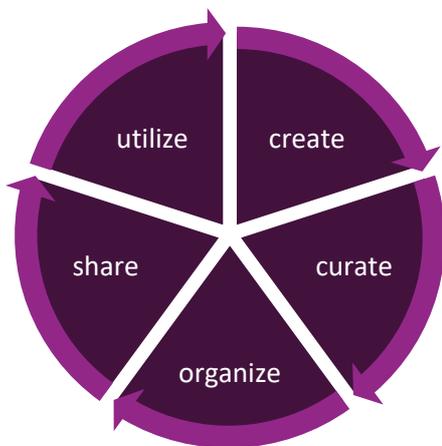

Synnøve Jacobsen
COO

Strategic Segments

Knowledge management

Knowledge management is the interdisciplinary process of creating, using, sharing, and maintaining information and knowledge. At its core, it is about making the best use of knowledge to achieve desired goals and objectives.

The Knowledge Management Cycle

With knowledge management, our goal is to support organizations and individuals in managing and leveraging knowledge. To do this, we help our customers create the digital structures they need to manage their data and information effectively and efficiently, supported by process and portfolio management.

Our knowledge management offerings include @WORK for all types of organizations, @HOME for private individuals, and ecosystems and networks for collaborating organizations and individuals.

@WORK

Our @WORK solution is for organizations and businesses who want an easy to use, digital platform for managing, organizing, and collaborating on their work – internally and in partnership with others.

@WORK support organizations need for governance by providing dedicated governance rooms for everything from managing internal operations and administration, to policies, general meetings, and investor relations. Governance rooms are access controlled workrooms that offer team chats, task management and unlimited document storage.

@WORK also support organizations in managing portfolios of work, like internal projects or product development, in dedicated workspaces. Workspaces are access controlled and can consist of an unlimited number of workrooms for projects, contracts, and discussion groups. Each workroom offers team chats, task management, portfolio categorization and unlimited document storage. @WORK can be used in combination with our collaborative tools, including video meetings and direct messaging.

@WORK market focus

For @WORK, we are currently working on increasing our market share among Small and Medium Enterprises (SMEs) and Not-for-Profit and Volunteer organizations.

@HOME

Our @HOME solution is there to help individuals organize their personal life and activities.

@HOME can be used to manage build and home renovation projects, managing spare time activities for the whole family, planning family holidays, and managing all important paperwork, including insurances, wills and testaments, and cohabitation contracts.

@HOME is available for all registered users and can be turned on or off as desired. Users of @HOME can create as many workrooms as they need to manage their projects, agreements and contracts, and collaborate in groups.

Each workroom offers team chats, task management, categorization, and unlimited document storage. @HOME can be used in combination with our collaborative tools, including video meetings and direct messaging.

@HOME market focus

For @HOME, we are working on increasing our market share among independent contractors, freelancers and existing users.

Patient management in care pathways NHS England

In the UK, around 200,000 people have severe asthma, and the disease causes over 500 deaths per year.

It is estimated that it costs between 582 and 825 million GBP annually to treat this patient group (NHS report).

The Severe Asthma Service at Portsmouth Hospitals University NHS Trust is a specialist centre for severe asthma in the region. They act as the hub in a network of hospitals and manage and treat patients from all hospitals in the network.

Together with the Severe Asthma Service, we are creating a platform module for managing severe and chronically ill patients through treatment in a care pathway. Care pathways are best practices to be followed in the treatment of a patient with a particular condition or needs. The intent is to improve treatment outcomes, reduce time spent on treatment, reduce cost, and collect anonymized data for research purposes. Initially, the project will focus on patients with chronic and severe asthma.

As part of the care pathway structure, we are creating a “one patient – one record” patient management system. This gives clinical staff instant access to the patient record, regardless of which hospital the patient belongs to.

In November 2021, we published the first version of the severe asthma care pathway module for clinical, research and administrative staff members at Portsmouth Hospitals University NHS Trust. In phase two we are making the care pathway available to clinical, research and administrative staff members at four other hospitals + related health care services. In phase three we will be looking at expanding the care pathway to other severe asthma networks in NHS England, in addition to involving and engaging severe asthma patients in the care pathway.

We have built the care pathway structure in a flexible and secure framework that allows us to both expand into other care pathways, e.g. diabetes and COPD, and geographic locations e.g. Norway.

@PATIENT market focus

For @PATIENT, our focus is on growing our market share within the NHS.

Eco-systems and networks

The induct.net platform facilitates work and collaboration in both networks and ecosystems. A question many ask is whether networks and ecosystems are the same, and if not, how they differ. Our approach is that they are indeed different, and we cater for these differences in the solutions we offer. Networks are usually based on mutually binding contracts or contractual frameworks, whilst ecosystems are driven by a mutual purpose, and include actions or development that cannot be 100% defined in the beginning.

Healthcare Innovation Network

Our Idea and Innovation Management solution has been on the market since 2009 and is used by both public and private sector organizations, including Equinor, NorgesGruppen, Hewlett Packard, the Norwegian Tax Administration, international healthcare providers and more than 90% of Norwegian healthcare trust.

Thousands of ideas are sent through our solutions and many end up being important and impactful innovations.

One of these ideas came from a nurse at a Danish university hospital. Based on her experience and field of expertise, she shared her idea of attaching oxygen tubes to pacifiers. A simple, yet brilliant, idea that makes it easier and much safer to administer the right levels of oxygen to newborns, infants, and toddlers.

There are countless examples of good ideas that have been developed into powerful products, services, and improvements in the healthcare sector.

The Oxygen Soother

The challenge has been to share these innovations with other healthcare trusts and maximizing the benefit from each innovation. Too often, we see that different trusts spend money on solving the same challenge or developing the same product or service.

In Norway, we have connected the Idea and Innovation Management solutions used by healthcare trusts in a sharing network. In the network, healthcare trusts share: (a) ideas that they are working on – so that everyone can see what is happening in other hospitals, (b) ideas that they have stopped working on – so that others can learn from the work

done and (c) implemented innovations – so that others easily can adopt and adjust a project to fit their needs and implement the innovation much faster than if they had to start from scratch.

National SME Ecosystem

SMB Norge is an interest organisation for SMEs in Norway that focusses on safeguarding the interests and business conditions of smaller companies. The organisation has 5000 members and is building an ecosystem for all SMEs in Norway - the National SME Ecosystem. The vision is to create a ‘powerhouse’ for SMEs, where they have access to a marketplace for products and services, insight into political projects and processes driven by SMB Norge, access to relevant courses and training in an SME Academy, membership benefits and the ability to join purchasing power projects and much more.

The first version of the ecosystem is already up and running. In the first version, SMEs are given the opportunity to get access to, and use, a version of Inducts @WORK solution that has been tailored to the needs of SME. It includes templates, guides, tips, and other information relevant to starting and running a successful business. All SMEs are connected to the ecosystem, where they have access to shared templates on everything from employee management to HSE documents and digital marketing.

Knowledge mining

Knowledge mining is about finding the information you need amongst trillions of documents available from open sources.

With movements like Open Access, more and more information is becoming available online. However, the challenge we face is still the same.

How to find the information and data we need or want when it is scattered around the web in thousands of different databases and websites.

Effective mining is about leveraging the right technology and having the right knowhow, so that data can be found and provide improved analysis capabilities, better intelligence, and more insight.

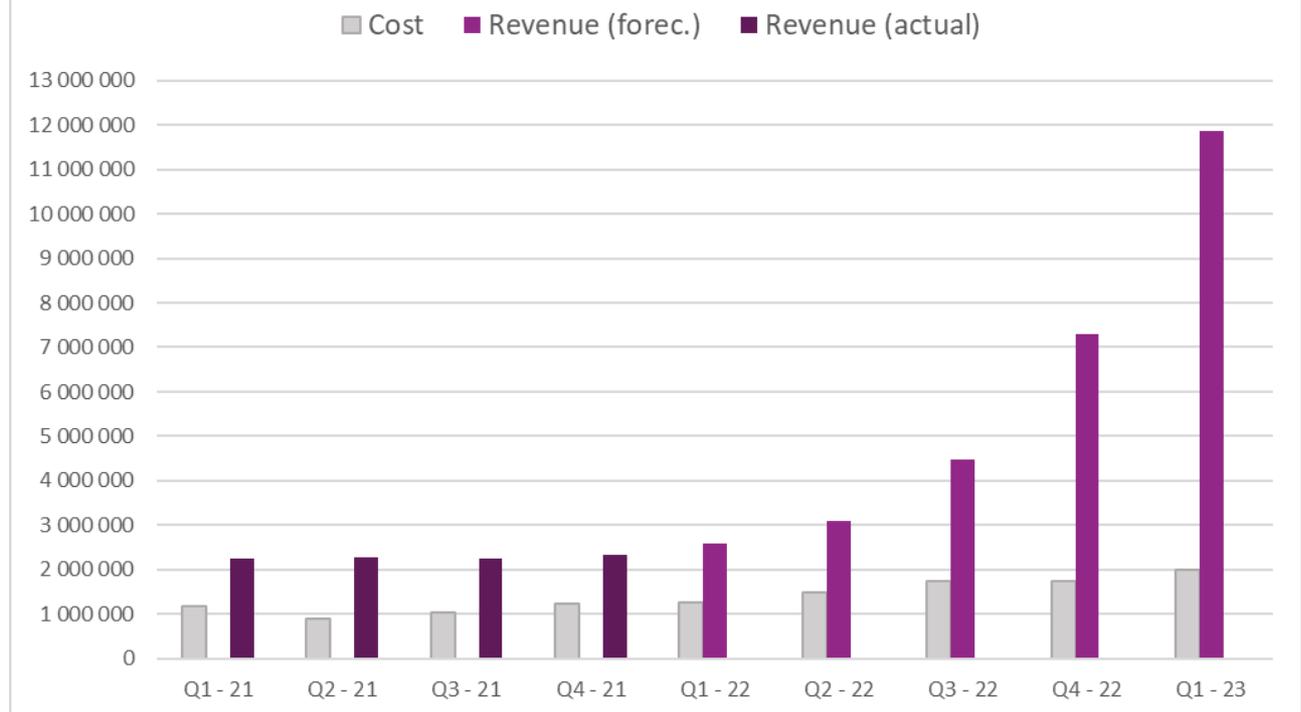

With knowledge mining, our goal is to find, analyze, structure and present data in a way that enable organizations and individuals to find value in it. Our knowledge mining offerings include Grantway – a global grant portal, and Leita – an open access search engine for scientific research and articles.

Grantway – the global funding portal

The grant portal ‘Tilskuddsportalen’ has provided Norwegian local authorities, charities, voluntary organisations, teams, and associations with thousands of funding opportunities every year, for more than 15 years. The portal is a trusted grant partner for more than 145 local authorities.

Grantway is a global portal for funding opportunities where provide people, students, scientists and researchers, organizations, charities, voluntary organizations – basically everyone, with the ability to search for, find, discuss, and apply for grants and funding that is available to them – locally, nationally, and internationally.

Grantway - revenues and forecast (Q1 2021-Q1 2023)

With Grantway, our goal is not only to become the preferred portal for finding and applying for funding opportunities. It is also where we want grant and funding providers to publish their funding opportunities, receive and assess applications, and do the necessary follow-up of successful applicants.

Grantway is developed and launched in phases, both in terms of geographical reach and the types of funding it includes.

Phase 1 – Grantway England

There are more than 900.000 voluntary organizations in England and our goal is to recruit 1,5 million users from these organizations who each spend at least 20 minutes in Grantway per month. With an estimated RPM of 25NOK, this level of user activity would generate 1,4 MNOK in revenues per month.

Launched: 1st March 2022.

Phase 2 – Grantway Global

Users from all over the world should be able to access and benefit from Grantway. The portal must be built and structured in a way that allow us to collect and present funding opportunity from every country in the world.

It should be possible for anyone, anywhere in the world, to access Grantway, from any device including smart phones, and search for funding opportunities that are available to them locally, nationally and internationally. Where the first version primarily contained grant opportunities, the global version should make it possible to search for and find relevant scholarships, fellowships, sponsorships and loans.

Launched: 29th June 2022.

Marketing Campaign – Grantway USA

There are more than 1.560.000 voluntary organizations in the US and our goal is to recruit 3 million users from these organizations who each spend at least 20 minutes in Grantway per month. With an estimated RPM of 35NOK, this level of user activity would generate 4,1 MNOK in revenues per month.

Estimated launch: Q3 2022.

Marketing Campaign – Grantway Spain

More than 5 million people are involved some form of charity/voluntary work in Spain. Our goal is to recruit 1 million of these users and that they will spend at least 20 minutes in Grantway per month. With an estimated RPM of 15NOK, this level of user activity would generate 600,000 NOK in revenues per month.

Estimated launch: Q3 2022.

Next steps

To get Grantway set-up and ready for launch in a new country is estimated to +/- 60 days. Following the launch of Grantway in the US, we will be looking to expand the portal into other English-speaking countries such Canada, the rest of the UK, Ireland, Australia, and New Zealand – in addition to looking at opportunities in countries like Germany and France.

We will continue adding new types of funding to the portal, including scholarships and research grants, and develop the functionality that enables organizations to enter and manage their funding opportunities on the portal.

Leita – the open access search engine

The “Open Access” initiative has led to rapid growth in available research articles. Not only are articles open for free download and use, but the data related to the research are also free.

However, the same challenge persists.

It is challenging to find the most relevant research information when articles and datasets are scattered around the web in thousands of different databases.

Based on our extensive expertise in data mining and preparing data for further usage, we are developing a state-of-the-art search facility capable of returning results from an unlimited number of sources, including PubMed, Unpaywall, Researchgate, and Doaj, to name a few.

Our goal is to become a comprehensive and trusted search engine provider of open access information, knowledge and data – for people, students, researchers, and librarians – basically everyone who is interested in, or in need of, research articles and data.

Currently, LEITA covers more than 20,000 databases containing published articles and datasets from publicly funded research. Together with medical researcher and librarians in NHS England (National Health Service), we will be testing our Leita POC (proof of concept) in Q2 2022.

Collaborative tools

Recent years, and the last two years in particular, have shown us that we need to develop new and different ways of working.

The induct.net platform is an example of how we can leverage technology to create new digital ways of working, alone and together with others.

With our selection of collaboration tools, we are looking to remove unnecessary barriers for digital collaboration and meetings. Our toolbox, which will grow bigger and bigger, currently consists of Meet@Induct – our video meeting solution and Chat@induct – our direct messaging solution for individuals and groups.

Meet@Induct

Meet is our video meeting solution that makes it easier to meet and connect with colleagues, partners, friends, and family.

Meet is free to use, for organizations and individuals alike, and comes without annoying limitations.

You can create as many video meeting rooms as you want, invite as many people as you need to your meetings, and meet for as long as it takes.

Those you invite to a Meet do not need to download anything or go through user registration. All they need to do is click on the meeting link you sent them.

Meet is available from all devices – on meet.induct.net – which means that creating or joining a video meeting has never been easier.

CHAT@Induct

Chat is our direct messaging solution that makes it easier to stay in touch and have good conversations with colleagues, partners, friends, and family.

Chat is free to use, for organizations and individuals alike.

You can create one-to-one conversations or group chats for when you need to communicate with a larger number of people, like your project team or your family.

Chat is available from all devices – on chat.induct.net – which means that you'll have access to your chats at all times.

eSign@Induct (coming soon)

In December 2021, Induct entered into a partnership agreement with Scrive, the eSign experts used by companies like Avis, Volvo, DNB and Moderna.

Together with Scrive, we will be giving our customers the opportunity to sign documents and contracts electronically through the induct.net platform. Our eSign service is subject to a small transaction fee.

Revenue Models

Platform revenues

Platform revenues consist of these 3 main revenue streams:

- subscriptions
- advertisement
- transaction fees

Subscription

Subscription revenues are split between (1) annual upfront payments and (2) quarterly upfront payments.

Our main sources of subscriptions are today related to Idea and Innovation Management and Tilskuddsportalen.

Advertisement

An ad-based business model has 3 key revenue drivers, (1) number of users, (2) impressions and (3) revenue per mille (RPM).

Increasing the number of registered users and maximizing the time each user spend on the platform per month, impacts the total number of ad impressions. It should also be noted that ads are shown to non-registered users as they participate in e.g., video meeting on the Induct platform.

Example:

If a Grantway users spend 1 hour a month on the platform, rather than 20 minutes, the revenues generated will triple per user per month.

RPM is the amount advertisers are willing to pay for their ads to be shown to users on the platform. The RPM is different from country to country. In some countries, like Norway and most European countries, digital marketing is a mature business model and part of day-to-day business activities. In other countries, like Nepal, the use of digital marketing is not as mature.

Today, we receive ads exclusively from Google's AdExchange. In the future, we will also actively sell ad campaigns directly to advertisers to maximize the RPM.

Through our AdExchange account, we can place advertisement on third party websites and mobile aps in return for a cut of the ad revenues generated by the third party.

All advertisement must be in compliance with our ad policy, and not be misleading, harmful, or offensive. It must not contain anything that is likely to result in physical, mental, or moral harm, contain profane language or seek to exploit children's credulity, loyalty, vulnerability, or lack of experience. Our advertisement policy follows the standards outlined by the NHS (national health service in the UK).

Transaction fees

Transaction fees are revenues generated by transactions carried out on the platform. Our eSign offering will be the first example of this type of revenue.

Professional services

Professional services consist of:

- implementation projects
- training

These revenues are generated by the implementation and training services we offer customers and users.

About Induct

Our history

Induct AS was established in 2007 and was a first mover in the development of software as a service (SaaS) solution for managing innovation efforts in, and between, organizations. Our software has enabled more than 350 organizations world-wide to release the potential that lie in identifying new and good ideas through innovation engagement and realizing the benefits of turning good ideas into new ways of thinking, acting, organizing, and working.

Our Idea and Innovation Management solution has been on the market since 2009 and is used by organizations like Equinor, Norgesgruppen, Hewlett Packard (HP), the Norwegian Tax Administration, international healthcare providers and more than 90% of Norwegian healthcare trust.

Key to the Induct mission is supporting the development of knowledge, and more importantly – allowing knowledge to be shared, found, and leveraged. In the healthcare sector we have connected hospitals in Norway, and international healthcare providers, in a sharing network. This means that great ideas and powerful innovations can more easily be shared, adopted, and implemented faster.

In the public sector, we have enabled cross-departmental collaboration and collaboration between the public and private sector, resulting in new and more effective ways of working.

A new step on our journey

In 2020, Induct took a new step on its journey as a knowledge empowerment provider. We launched a new digital platform – induct.net – where work and collaboration is taken to a new level for organizations and individuals alike. By removing unnecessary and unhelpful barriers to collaboration, the platform is a unique facilitator of knowledge development, sharing and empowerment within organizations, in collaborative networks and ecosystems.

Our work within the innovation field has taught us many lessons, one being the importance of having a future-ready business model. By incorporating advertisement in selected areas of the induct.net platform, we offer the core platform free of charge, and without unnecessary restrictions. After all, what good is knowledge if it is hidden behind yet another payment wall.

Moving the world forward

The speed of digitalization is fast, and the Covid-19 pandemic has fully illustrated how we can utilize digital platforms, solutions, and tools to continue working and collaborating in challenging and unexpected situations. The world has always evolved through humanities willingness, eagerness, and desire to move forward. Induct will continue to develop and deliver digital platforms and solutions that support work, co-working, collaboration, networks, and ecosystems, and be a facilitator of knowledge empowerment.

The Induct Group

The Induct Group includes Induct AS and its 100% owned subsidiaries Induct Solutions UK Ltd. (UK), Induct Software Inc. (US), Induct SEA S.L (Spain), Induct R&D S.L (Spain), OSINT Analytics AS (Norway) and Tilskuddsportalen AS (Norway) – a fully owned subsidiary of OSINT Analytics AS.

Mergers and acquisitions

We are continuously looking for opportunities that can strengthen our market share, revenues, technology, or core knowledge.

- 1) The strike price for 350,000 options is NOK 4 per share.
The strike price for 1,000,000 options is NOK 4 per share.
The strike price for 350,000 options is NOK 5,5 per share.
- 2) Pending share issue relates to the acquisition of subsidiaries in Brazil, Spain, and India.

In addition to the 331,000 shares mentioned above, the purchase agreements include a performance based earn-out element, with a total cap of an additional 1,1 million shares based on aggressive growth performance over a 3-year period from the acquisition date. No shares are earned as of 31.3.2022.

- 3) A convertible loan of NOK 10M with conversion price of NOK 6,70 issued to NPP Capital AS. A total of 1,492,537 shares.
Convertible loan of NOK 0,5M issued to Intelco AS. A total of 50,000 shares.
Convertible loan of NOK 10M issued to NPP Capital AS with conversion price of NOK 7,5 per share. A total of 1,333,333 shares.
- 4) EHGO has warrants attached to the convertible notes. The exercise price for the warrants is 120% of the weighted average trading price the last 5 trading days prior to Induct requesting a tranche.

The following warrants have been issued:

Tranche 1

100 000 warrants each giving the right to subscribe to one share each at a subscription price of NOK 12.50 per share.

Tranche 2

96 153 warrants each giving the right to subscribe to one share each at a subscription price of NOK 13.00 per share.

Tranche 3

178,571 warrants each giving the right to subscribe to one share each at a subscription price of NOK 7.34 per share.

The warrants expire five years from their issuance.

- 5) Part of the purchase price for 100 % of the OSINT Analytics AS shares is to issue 1 887 820 shares to the shareholders in OSINT which chose to convert their OSINT shares to Induct shares. In addition, NOK 18 878 200 will be converted to shares in Induct when certain criteria are met. The conversion price is the weighted average share price of the month prior to meeting the criteria for conversion.

Financial Results

The group's platform revenue in Q2 2022 amounts to NOK 4.8 million, which is an increase of 139 % compared to Q2 2021. Consulting revenue in Q2 2022 amounted to NOK 0.2 million which is down from NOK 0.7 million in Q2 2021.

Operating costs in Q2 2022 is NOK 4.7 million, which is up 113,5 % compared to Q2 2021.

Financial costs are mainly interest on convertible loans.

EBITDA for Q2 2022 has increased to NOK 3.0 million compared to NOK 0.9 million in Q2 2021.

Net Profit before taxation in Q2 2022 is NOK minus 0.5 million compared to NOK minus 0.9 million in Q2 2021.

The booked equity is NOK 37.2 million by the end of Q2 2022, compared with NOK 2.2 million in Q2 2021.

The group's interest-bearing debt by end of Q2 2022 amounts to NOK 25.1 million, which primarily consists of convertible loans from NPP Capital AS and Intelco AS.

Deferred revenue amounting to NOK 6.7 million by the end of Q2 2022, up from NOK 2.4 million in Q2 2021. Long term debt include NOK 18.9 million to previous OSINT Analytics AS shareholders to be converted to equity.

Cash Situation and Funding

The cash situation is satisfactory for the company. However, the management and board strive to provide the most beneficial financing alternatives to its shareholders.
